

BORN FREE'S GREAT DEBATE

Overconsumption: Do we really need all this stuff?

About Born Free

As an international wildlife charity, we work tirelessly to ensure that all wild animals, whether living in captivity or in the wild, are treated with compassion and respect, and are able to live their lives according to their needs. We seek to have a positive impact on animals in the wild and protect their ecosystems in perpetuity, for their own intrinsic value and for the critical roles they play within the natural world.

Born Free's Great Debate

This free programme provides teachers with tools to engage school students in meaningful debates about key wildlife or environmental topics. Students will gain knowledge about the debate topic, plus extensive skills to research, frame and deliver an argument.

Debating encourages research, reasoned argument and application of facts, and ingrains 21st Century Skills – 12 abilities today's students need to succeed in their careers during the Information Age (namely: critical thinking, creativity, collaboration, communication, information literacy, media literacy, technology literacy, flexibility, leadership, initiative, productivity and social skills).

Armed with these skills, young people are more equipped to reduce their impact on biodiversity and the environment by making simple lifestyle changes, and encouraging others to follow. By engaging young people on this topic, we also hope they can develop the skills necessary for each individual to have a voice.

Topic 5: Overconsumption, is linked to the KS2, 3 and 4 National Curriculums in Science, Biology, Chemistry, Physics, English, Geography, Business Studies, Citizenship and SMSC. See full list, learning objectives and content notes below. Full resources will be available as a free download via [our website](#) from late August 2023.

Overconsumption & The Environment

Our consumer habits are at the heart of the planet's environmental crisis. Whether contributing to climate change through factory emissions and transportation, or impacting biodiversity through pollution and waste materials, our need to own the latest electronic device or follow the latest fashion trend has led many countries to consume natural resources at a rate that far exceeds the planet's capacity to renew them¹. In fact, if the citizens of the world all lived like those of the United States, we would require five full planets to satisfy the global need for resources every year².

Through this Great Debate topic, students will have the opportunity to delve deeper into the issue of overconsumption and decide whether we can carry on as we are, or whether we need to drastically change our ways in order to protect our planet and its wildlife, and if so, whose responsibility is it to bring about change? **Your students will decide.**

Finally, a follow up activity will give your students the chance to put their learning into action and create a plan to tackle overconsumption on an individual, class, school or national level.
